

# DEPARTMENT OF CIVIL ENGINEERING

## Course Book for M. Tech. in Environmental Engineering

**Visvesvaraya National Institute of Technology, Nagpur**

JULY 2015

### Brief about Civil Engg Department:

Civil Engineering Department is the oldest department in this institute right from the establishment of Government College of Engineering in Nagpur 1956. The department offers the undergraduate course of B.Tech in Civil Engineering and Four Postgraduate Courses of M.Tech as given below.

#### **Program**

#### **Description**

#### **UG in Civil Engineering**

Started with 60 seats in 1956  
Intake increased to 71 in 2008  
Intake increase to 82 in 2009  
Intake increase to 92 in 2010

#### **PG in Civil Engineering Department**

- |                                    |                             |
|------------------------------------|-----------------------------|
| 1. Environmental Engineering       | Started in 1966 (32 seats ) |
| 2. Water Resources Engineering     | Started in 2005 (20 seats ) |
| 3. Construction Technology and Mgt | Started in 2010 (20 seats ) |
| 4. Transportation Engineering      | Started in 2012 (20 seats ) |

#### **VISION:**

To contribute effectively to the National Endeavour of producing quality human resource of world class standard in Civil Engineering by developing a sustainable technical education system to meet the changing technological needs of the Country incorporating relevant of social concerns and to build an environment to create and propagate innovative technologies for the economic development of Nation.

#### **MISSION:**

The Mission of the undergraduate Civil Engineering program is to develop students into capable civil engineering graduates by imparting appropriate high quality education in Civil Engineering so that they could be readily adapted by the service sector to meet the challenges faced by the Nation. The program strives for excellence in engineering education and profession. It also aims to promote all round development of the personality of students by suitably involving them in Co-curricular and extra-curricular activities.

**TABLE 1. CREDIT REQUIREMENTS FOR POST GRADUTE STUDIES**

<b>Postgraduate Core (PC)</b>		<b>Postgraduate Elective (PE)</b>	
Category	Credit	Category	Credit
Departmental Core (DC)	37	Departmental Electives (DE)	15
Basic Science (BS)		Other Courses (OC)	00
<b>Grand Total PC + PE</b>			<b>52</b>

The number of credits attached to a subject depends on number of classes in a week. For example a subject with 3-1-0 (L-T-P) means it has 3 Lectures, 1 Tutorial and 0 Practical in a week. This subject will have eight credits ( $3 \times 2 + 1 \times 1 + 0 \times 1 = 8$ ). If a student is declared pass in a subject, then he/she gets the credits

associated with that subject. Depending on marks scored in a subject, student is given a Grade. Each grade has got certain grade points as follows:

Grades	AA	AB	BB	BC	CC	CD	DD	FF
Grade Points	10	09	08	07	06	05	04	Fail

The performance of a student will be evaluated in terms of two indices, viz. the Semester Grade Point Average (SGPA) which is the Grade Point Average for a semester and Cumulative Grade Point Average (CGPA) which is the Grade Point Average for all the completed semesters at any point in time. SGPA and CGPA are:

$$SGPA = \frac{\sum_{\text{semester}} (\text{Course credits} \times \text{Grade points}) \text{ for all courses except audit}}{\sum_{\text{semester}} (\text{Course credits}) \text{ for all courses except audit}}$$

$$CGPA = \frac{\sum_{\text{All semester}} (\text{Course credits} \times \text{Grade points}) \text{ for all courses with pass grade except audit}}{\sum_{\text{All semester}} (\text{Course credits}) \text{ for all courses except audit}}$$

Students can Audit a few subjects. i.e., they can attend the classes and do home work and give exam also, but they will not get any credit for that subject. Audit subjects are for self enhancement of students.

### Details about Faculty members of Civil Engineering Department

Name of Faculty Member	Designation	Qualifications	Areas of specialization
Mhaisalkar V.A	Professor	B.E, M.Tech , Ph.D	Environmental Engg
Gupta Rajesh	Professor	B. E, M.Tech., Ph.D.	Environmental Engg.
Katpatal Y.B	Professor	B.Sc, M.Tech, MBA, Ph.D	Remote Sensing and GIS
Tembhurkar. A.R.	Associate Professor	B.E, M.Tech , Ph.D	Environmental Engg
Latkar M.V	Associate Professor	B.Sc., M.Sc, Ph.D	Environmental Biochemistry
Lataye.D.H	Assistant. Professor	B.E, M.Tech , Ph.D	Environmental Engg
Ralegaonkar R.V	Associate Professor	B.E, M.E, Ph.D	Energy Efficient Building, Disaster Management, Construction Technology & Mgt.
Ghare A.D	Associate Professor	B.E, M.Tech , Ph.D	Hydraulic Engg
Landge.V.S	Associate Professor	B. E., M.E, Ph.D	Traffic Engineering
Mondal .A	Associate Professor	B. E., M.E, Ph.D	Soil Mechanics and Foundation Engg
Vasudeo. A.D.	Assistant. Professor	B.E, M.Tech , Ph.D	Water Resources Engg
Patel Anjan	Assistant. Professor	B.E, M.Tech , Ph.D	Soil Mechanics and Foundation Engg
Dongre.S.R	Assistant. Professor	B.E., M.Tech, Ph.D	Environmental Engg.
Wanjari. S. P.	Assistant. Professor	B.E., M.Tech, Ph.D	Construction Technology and Management, Concrete Technology
Tawalare.A.G	Assistant. Professor	B.E., M.Tech	Structural Engg, Construction Technology & Mgt.
Mirajkar A.B	Assistant Professor	B.E, M.E, Ph.D	Water Resources Engg.

**VISION:**

To contribute effectively to the national endeavour of producing quality human resource by keeping the graduates abreast of the latest technological development in the world and developing necessary skills to resolve real life problems with application of innovative and appropriate technologies in the field of Environmental Engineering.

**MISSION:**

The mission of the PG program in Environmental Engineering is to develop human resource with necessary knowledge and skills to meet challenges in Environmental Engineering for sustainable development.

**Programme Educational Objectives (PEOs)**

The main objectives of Environmental Engineering program are:

1. To develop qualified engineers who will achieve a high level of technical expertise to be able to succeed in various positions in the area of Environmental engineering such as research, teaching, design and consultancy practices and in other fields they choose to pursue.
2. To develop engineers who are capable of producing engineering designs that are functional & cost effective and are based on sound principles of sustainability.
3. To enhance analytical skills so as to enable resolving complex industrial and social problems with recourse to the principles of resource conservation, recycle, reuse and recovery.
4. To make overall development through providing opportunity of participating in R&D projects with state-of-art facility laboratories, consultancy and professional society activities in the area of Environmental Engineering.

**Programme Outcomes (PO)**

The qualified engineers are

1. Capable of analysing and resolving Environmental Engineering problems in real life situation with full knowledge and consideration. (a,b, e ,i)
2. Able to develop appropriate engineering designs using principle of theory and practise. (c)
3. Able to apply the skills acquired in planning for sustainable development. (d,h, j)
4. Able to contribute effectively in environmental engineering profession. (f,g, h,k)

### Scheme of Instructions for M Tech (Environmental Engineering)

Program Core(PC)		Program Elective (PE)	
Category	Credit	Category	Credit
Departmental Core(DC)	37	Departmental Elective(DE)	15
Grand total PC+PE			52

I Semester				II Semester			
CORE				CORE			
Code	Course	L-T-P	Cr	Code	Course	L-T-P	Cr
CEL501	Environmental Chemistry and Microbiology	3-0-0	3	MAL 407	Statistics and optimization Technique	3-0-0	3
CEL 502	Municipal and Industrial Water Treatment	3-0-0	3	CEL505	Municipal Solid Waste Management	3-0-0	3
CEP 501	Environmental Chemistry and Microbiology	0-0-2	1	CEL540	Industrial Waste Water Treatment, Recycle and Reuse	3-0-0	3

CEL559	Energy Efficient Buildings	3-0-0	3				
CEL 531	Spatial Analyses for Resources Management	3-0-0	3				
CEP 531	Spatial Analyses for Resources Management*	0-0-2	1				
CEL 418	Energy Conversion & Environment	3-0-0	3				
CEL 432	Environmental Impact Assessment	3-0-0	3				
CEL 541	Water Distribution System Design	3-0-0	3				
<b>1 DC + 2 DE = 9/10 Credits</b>				<b>1 DC = 9 Credits</b>			

\* Student must register both for practical and Theory of a course.

## **MAL 407 - STATISTICS & OPTIMIZATION TECHNIQUE**

**[(3-0-0); Credits 3]**

**Course Outcomes :** The students will be able to design experiments and analyse the data using various statistical methods.

Sampling Theory: Population Parameter, Sample Statistics, Sampling distributions, Sample mean, Sampling distribution of means, the sample variance, the sampling distribution of variance.

Estimation Theory: Point estimate and interval estimates, reliability, confidence interval estimates of population parameters, confidence intervals for means, proportions and variance.

Tests of Hypothesis and Significance: Statistical decisions, tests of hypotheses and significance, Type I and Type II errors, level of significance, one tailed and two tailed tests. Tests involving small samples and large samples, fitting theoretical distributions to sample frequency distribution, The chi-square test for goodness of fit.

O. R. Techniques

Linear Programming: Formulation of linear programming problem, Graphical solution- simplex method (including Big M method and two phase method), dual problem- duality theory, dual simplex method, revised simplex method.

Transportation problem: existence of solution-degeneracy- MODI method; Assignment problem- traveling salesman problem

Nonlinear programming problem (NLPP): Constrained NLPP, Lagrange's multipliers method – convex NLPP, Kuhn-Tucker conditions.

2. H.A. Taha, Operation Research, Prentice Hall of India Pvt. Ltd.
3. J.C. Pant, Introduction to Optimisation: Operations Research, Jain Brothers, New Delhi.
4. Miller and Freund, Probability and Statistics for Engineers.

**Course Outcomes:**

1. Understand and apply basic concept of waste to energy technology and environmental protection.
2. Capable to conduct environmental appraisal, perform energy audit and assessment of energy potential of energy sources
3. Capable to design energy conversion systems
4. Understand contemporary environmental and social issues related to energy conversion

Significance of Energy Conversion and Environment, Overview of Global and Indian Energy Scenario; Environmental Impacts of Energy Conversion, Principles of Waste Minimization and Energy Recovery, Renewable and Non- Renewable Energy Sources; Estimation of Potential of Energy Recovery from various Sources, Energy economics; Energy Conversion Methods: Thermal, hydro, nuclear, solar, wind, tidal etc their principles and application, Waste to Energy options: physical, thermo chemical and bio chemical processes: pelletization, briquetation, Combustion, Gasification, pyrolysis; Fuels Derived anaerobic digestion, Biogas Technology, Future Technologies for Waste to Energy Systems; Introduction to Microbial Fuel cell, Gas generations and collection in landfills, Measurements and Control; Energy and Resources Conservation Strategies and Policies; Environmental Appraisal, Energy audit, Carbon Foot prints, Sustainable Energy-Efficient systems, Intelligent Green Building, Case studies of sustainable Energy Projects in the field of Water Resources, Infrastructure and Environmental System.

**Course Objective:**

1. To introduce hazardous waste materials.
2. Teach about the generation, classification and categories and sources of hazardous waste.
3. Teach about the methods of treatment and management of hazardous waste.
4. Various rules about the management and handling of hazardous waste.

Generation, storage, transportation, treatment, disposal, exchanges and minimization, legislative and technical aspects, current management practices; Environmental audits, pollution prevention, facility development and operations, treatment and disposal methods; physical, chemical, thermal, biological processes, land disposal with general applications to the industrial and energy-producing sectors, Site remediation. Special wastes, such as, infectious and radioactive waste.

5. E.J.Martin and J.H.Johnson, Jr., Hazardous Waste Management Engineering Van Nostrand Reinhold Co. Inc. New York, 1987.

**Course outcome :** The students will be able to assess the impact on the environment of various environment management techniques. The students will be able to analyse the impact on environment due to some new developmental activities.

Evolution of EIA; EIA at project; Regional and policy levels; EIA process in India and other countries; EIA methodologies; Screening and scoping criteria; Rapid and Comprehensive EIA; Environmental health impact assessment, Environment risk analysis; Uncertainties; Practical Applications of EIA; Baseline collection of data; Prediction and assessment of impacts of physical biological and socio-economic environment; Development of environment management plan; Post project monitoring; EIA report and EIS; Review process. Case histories of applications for industrial; Water resources and irrigation projects; ports and harbours, Mining, Transportation and other projects sectors

2. Rau, GJ. And Wooten, C.D., Environmental Impact Analysis Handbook, McGraw Hill 1980
3. Ministry of Environment and Forests, GoI, Current Documents on Guidelines for EIA.

**Course Objective**

To interpret various fundamentals of the subject & use them in the field of Environmental Engineering.

**Syllabus:**

Basic concepts of oxidation and reduction reactions, Gas laws and their application in Environmental Engineering, Osmosis, Dialysis, Principles of solvent extraction, Amphoteric hydroxides.

Concept of pH, and its application in Environmental Engineering, Definitions and basic concepts of acids, bases and buffers, colloid chemistry, Basic concepts of carbohydrates, proteins, lipids and enzymes, Definition and concept of Chemical Oxygen Demand (COD), Biochemical Oxygen Demand (BOD) and Total Organic Carbon (TOC).

Chemistry of water treatment processes like coagulation, disinfection, water softening and demineralization.

Definitions of Ecology and ecosystem, structure and components of ecosystem, concepts of trophic levels, food chain and food web, types of ecosystem, productivity, sulphur cycle, nitrogen cycle.

Introduction to Microbiology, Haeckel's classification, Morphology and structure of bacteria, nutritional requirement and nutritional classification of bacteria, Growth of bacteria, Indicator bacteria, Multiple Tube Dilution (MTD) and Membrane Filter (MF) techniques, Definition and characteristics of viruses.

**Course outcome :****REFERENCES:**

2. Pelezar Reid & Chan, Microbiology Tata McGraw Hill, Latest.
3. Powar & Daginawala, General Microbiology Vol. I &II, Himalaya Publishing House, Latest.

**Course Objective:**

To acquire skill to test the various physical, chemical & bacteriological parameters of water and wastewater.

1. Determination of following parameters in water
  - 1) Alkalinity 2) Chloride 3) Hardness 4) Sulphate
  - 5) Turbidity 6) Dissolved oxygen 7) Kjeldahl nitrogen 8) Iron 9) Manganese 10) Heavy metals
2. Determination of COD and BOD of wastewater
3. MTD method for enumeration of indicator bacteria in water
4. Heterotrophic plate count for enumeration of bacteria.

**REFERENCES:**

1. Standard Methods for the Examination of Water & Wastewater, APHA, AWWA, WEF, Latest.

## **CEL 502 - MUNICIPAL AND INDUSTRIAL WATER TREATMENT**

**[(3-0-0); Credits 3]**

Water quality criteria and standards, Requirement of water treatment facilities, Unit operation & Unit process, Synthesizing water treatment system, Site selection, Process selection, Theory and Application of water treatment process- aeration, coagulation, flocculation, sedimentation, filtration, disinfection. Hydraulic design of water treatment plant, Advances/ modification/ modern development in water treatment, Control of water treatment process, O&M of water treatment plant, Water treatment plant residuals management. Industrial Water Quality requirement, Specific treatment for industrial purpose; Softening, Lime Soda and Ion Exchange, Desalination- Distillation processes, Reverse Osmosis, Electrodialysis; Fluoride Removal, Arsenic Removal, Fe and Mn removal, Taste and Odor and color Removal, Adsorption, Ultrafiltration, Water treatment for Swimming Pool.

### **REFERENCES:**

1. Fair Geyer & Okun, Water and Waste water Engineering Vol I and II, John Wiley & Sons 1<sup>st</sup>.
2. W.J.Weber Physiochemical process for water quality control, John Wiley & Sons 2<sup>nd</sup>.
3. ASCE, AWWA Water treatment plant design
4. CPHEEO, Manual on Water supply and Treatment, Govt. of India Publication.
5. R.L.Sank, Water treatment plant for practising engineers, Ann Arbor Science.

**Course Objective:**

The students will be able to:

Acquire the practical knowledge on sampling and analysis of various air pollutants viz. SO<sub>2</sub>, NO<sub>2</sub>, SPM, RSPM etc. They will also be able to get the knowledge on sampling and analysis of solid waste.

Collection, preservation and analysis of samples from water treatment plants, municipal wastewater treatment plants or industrial wastewater treatment plants, Collection and analysis of air samples for SPM, RSPM, SO<sub>2</sub>, NO<sub>x</sub>, etc. Characterization of municipal solid wastes

Minimum TEN practicals shall be performed from the list given below:

1. Study of various sampling and analytical equipment in air pollution
2. Determination of wind speed and direction
3. Preparation of wind rose diagram
4. Modeling of air pollution concentration
5. Determination of Particulate (SPM and RSPM) matter concentration in atmosphere by using high volume sampler
6. Determination of dust fall in atmosphere
7. Sampling and analysis of SO<sub>2</sub> in atmosphere
8. Sampling and analysis of NO<sub>2</sub> in atmosphere
9. Sampling and analysis of CO in atmosphere
10. Analysis of VOCs in air
11. Analysis of hazardous air pollutants
12. Characteristics and composition of solid waste
13. Proximate analysis of solid waste
14. Determination of calorific value of solid waste
15. Elemental analysis (CHNOS) of solid waste
16. Heavy metal analysis of solid waste
17. Toxicity characteristic leaching procedure (TCLP) for solid waste samples
18. Extractions of samples for pesticides

**REFERENCES:**

1. Standard Methods for the Examination of Water & Wastewater, APHA, AWWA, WEF.
2. IS Code No. 5182 Parts 1 to 20.
3. IS Code No. 10158, 9234 & 9235

**Course Outcomes:**

1. Understand and apply basic concepts of industrial wastewater treatment.
2. Apply principle of waste minimisation for reuse recycling and recovery.
3. Synthesize treatment system, component or processes for industrial wastewater treatment.
4. Formulate and design treatment units using hydraulic principles and calculation techniques for industrial wastewater treatment process.
5. Development of treatment flowsheet based on wastewater characteristics for various industries.
6. Analyse and evaluate treatment alternative flow sheets through case studies.

Constituent of sewage and sewage characteristics, conventional municipal wastewater treatment flow sheet, functions of different unit processes, treatment requirements. Process analysis: Reaction and reaction kinetics, mass balance analysis, reactors and hydraulic characteristics, reactor selection, practical aspects of reactor design.

Preliminary treatment: Screening grit removal; Primary Treatment: Principles of sedimentation

Biological treatment : Principles of biological treatment, Role of microorganisms in WWT, types of biological processes for WWT, introduction to microbial metabolism, kinetics of biological growth, aerobic and anaerobic treatment of sewage, suspended and attached growth biological treatment processes -Activated sludge, tricking filters, rotating biological disc. Packed bed and fluidized bed treatment, stabilization ponds, design aspects of Wastewater Treatment Units.

Biological phosphorus and nitrogen removal

Sludge treatment: Sludge treatment flowsheet, sludge quality and quantity, various methods of sludge treatment, aerobic and anaerobic sludge digestion, sludge conditioning, dewatering of sludge, conveyance, storage and disposal.

Water reclamation technologies

Advanced waste water treatment: Principles of tertiary treatment, Reuse and resource recovery.

Recent developments in Wastewater Treatment

## **CEL 504 - WATER SUPPLY AND WASTEWATER COLLECTION SYSTEMS [(3-0-0); Credits 3]**

### **Course Outcomes:**

1. Capable of using various methodologies for hydraulic analysis of various components of water distribution and wastewater collection system.
2. Capable of designing of various components of water distribution systems and wastewater collection system.

Analysis of flow in pipe network using Hardy Cross, Newton-Raphson and Linear Theory method, Reservoirs, Pumps and Valves in Water distribution systems, Pumps and Pumping Stations, Pipe Appurtenances, Pipe material selection, laying and jointing of pipes, Water supply to multi-storeyed buildings, Water supply during fairs, festivals and emergencies. Maintenance of distribution system.

Design of pumping main including water hammer consideration, Critical path method for design of water distribution networks.

Objectives, Type of systems and sewers, requisites for sewerage system design, Hydraulics of sewers, Velocity of equal cleansing, Sewer shape vis-a-vis their usefulness, sewer invert drop.

5. CPHEEO, Manual on Sewerage and Sewage Treatment, Ministry of urban development, GoI.
6. Bhave P.R, Optimal design of water distribution networks, Narosa Publishing Co., New Delhi (2003).

**Course Objective:**

The students will be able to:

Understand the concept of municipal solid waste management, various classifications of solid waste, characteristics of solid waste, methods of collection of solid waste and method of management of solid waste.

**Course Outcomes:**

1. Gain broad understanding of municipal solid waste
2. Knowledge about the classification, sources and characteristics of municipal solid waste
3. Knowledge about the collection transportation of municipal solid waste  
Methods of processing and disposal of solid waste.

Sources, Classification, Composition – Quality – characteristics-Physical, Chemical and microbiology involved, Quantity-generation of municipal refuse, per capita contribution, Density, Sampling; Collection and transportation of waste-refuse transportation vehicles; optimization of routes, maintenance of vehicles; industrial waste management; reduction, Recycle, Reuse, Recovery and Reporting; hazardous waste management;

Disposal of waste by land filling, site selection, leachate and gas collection, lining; composting of waste, methods, factors affecting, Incineration, types, energy recovery and products of incineration; Processing of waste for useful products-pyrolysis, RDF; Legislation and regulatory trends

7. S. S. Dara A text book of environmental chemistry and pollution control S. Chand & Co. Ltd. 2002
8. American public works association Municipal refuse disposal Public administration service, Chicago 1970.

**Course Objective:**

The students will be able to:

Understand the concept of air pollution and its effects on human, animals, plants and materials, methods of sampling and analysis of air pollutants and methods of control of air pollution.

**Course Outcomes:**

1. Gain a broad understanding of air pollution sources and classification
2. Knowledge on meteorological parameters, modelling, methods of sampling and analysis of air pollutants
3. Effects of air pollutants on human, animals, plants and materials
4. Knowledge about Control of various air pollutants and Design of control equipment.

Sources, Classification, Causes and effects of air pollution; Metrological parameters of dilution, dispersion, distribution of emission of stack pollutants, Air quality monitoring, sampling and analysis of air from ambient and other sources of pollutants, Monitoring Instrumentation and principles of operation, Exhaust pollution, Control equipment for gaseous and particulate pollutants, Legislation and regulatory trends, Impacts of air pollution.

5. Stern A. C, Air pollution, Tata McGraw Hill International, Vol I to IX.
6. Kudesia v. P., Air Pollution, Pragati prakashan, meerut 2<sup>nd</sup> 1980.

**Course Outcomes:**

The students will be able to make functional hydraulic design of water supply and wastewater engineering systems with full knowledge and understanding

Design aspects of water and waste water systems ranging from pipeline to treatment plant; sanitary landfill; a detailed design of atleast one unit will be completed as either an individual or class project.

**REFERENCES:**

1. Qasim S.R Wastewater Treatment Plant Planning, Design and Operation Holt Rinehart & Winston, N. Y 1990.
2. Dr. A.G. Bhole, Water Treatment Plant Design Indian Water works Association 1<sup>st</sup> edition.
3. Amalendu Bagchi, Design of landfill & Integrated Solid waste Management, John Willey & Sons, Inc.2<sup>nd</sup> edition.

**Course Outcomes:**

The students will be able to make functional hydraulic design of water supply and wastewater engineering systems with full knowledge and understanding

Source, Production and Classification of Wastes.

Soil Pollution Processes; Physical-chemical and Biological Interactions in Soil.

Effects on Geotechnical Properties and Case Studies.

Waste Disposal Facilities such as Landfills and Impoundments, Slurry walls, etc.

Barrier Systems- Basic concepts, Stability, compatibility and performance, Geo- membranes.

Monitoring Sub surface contamination; Stabilization/ Solidification of Wastes.

Remediation Methods.

**REFERENCES:**

1. Daniel, D. E., Geotechnical Practice for Waste Disposal, Chapman and Hall, London 1993.
2. Reddi, L. N., and Inyang, H. F., Geoenvironmental Engineering - Principles and Applications, Marcel Dekker, Inc., 2000.
3. Hsai-Yang Fang, Introduction to Environmental Geotechnology, CRC Press, 1997.

**Course Objective:**

1. To introduce the subject of Bioremediation of contaminated sites
2. To apprise the students about relevant microbial processes involved in bioremediation
3. To enable the students to strategize bioremediation approach for a particular site To enable the students to understand the conditions required for effective bioremediation
4. To enable the students to initiate preliminary and detailed site investigations for hazardous chemicals / wastes contaminated site
5. To enable the students to execute bioremediation process using microbial approach, molecular and suitable engineering hard wares.

**Course Outcomes:**

Application of knowledge of bioremediation techniques to treat contaminated air, water and land.

Introduction to biotransformation, biodegradation and bioremediation, history of bioremediation, xenobiotics and their structures and persistence in the environment, *in situ* and *ex situ* bioremediation technologies and their merits and demerits.

An overview of the current bioremedial practices and its application, factors affecting bioremediation (physical, chemical and biological), biostimulation and bioaugmentation, bioconcentration and biomagnifications.

Natural and programmed bioremediation, inducible and degrading enzymes and their roles, Roles of electron donors and acceptors in bioremediation, anaerobic and aerobic bioremediation processes, application of bioinformatics in bioremediation.

Concept of phytoremediation, roles of phytochelatins and chemicals secreted by the plant roots, phytoremediation with trangemic plants, fungal and algal bioremediation, merits and demerits of phytoremediation.

Solid and slurry phase bioremediation (composting, landfarming, slurry bioreactors and lagoons), liquid phase bioremediation, bioventing, soil-vapour extraction(SVE) and treatment.

Genetic engineering and bioremediation, regulations of GM organisms in India, biosensors and their applications in bioremediation

Case studies.

1. Baker H. and Herson D.S. Bioremediation, McGraw Hill, 1994
2. Eweis J.B., Ergas S.J., Chang D.P.Y. and Schroeder E.D., Bioremediation Principles, McGraw Hill, 1998.

**Course Outcomes:**

Be able to understand and identify major environmental issues of sustainable development (b, j,) contribute to improving quality of environmental with recourse to appropriate tools of environmental management.(c, d, h, k,f)

Sustainable development and strategies, Waste minimization and pollution prevention strategies – cleaner technologies, Tools of corporate environmental management; Environmental policy, Environmental management systems; ISO : 14000; Environmental Impact assessment, Indian environmental legislations and environmental acts such as Water Act (1974), Air Act (1981), Environmental (Protection) Act (1986); International Environmental Treaties; Life cycle assessment; environmental labeling, environmental audit, Environmental performance assessment; regulatory standards for industrial wastewaters and atmospheric emission.

## **CEL 511 - ENVIRONMENTAL ENGINEERING SYSTEMS OPTIMIZATION [(3-0-0); Credits 3]**

### **Course Outcomes:**

Application of knowledge of various optimisation techniques and economic principles to design various environmental engineering systems.

Principles of economic analysis, mathematics of economic analysis, discounting factors and different discounting techniques. Optimization methods for environmental engg. Systems e.g. pumping main, water transmission & distribution networks, wastewater collection systems, water treatment systems, wastewater treatment systems, solid waste management systems and air pollution control systems.

### **REFERENCES:**

1. Haith D. A. Environmental systems optimization, John Willey , New York 1982.
2. Bhave P.R. Optimal design of eater distribution networks Narosa Publishing Co., New Delhi.
3. Kalyanmoy Deb Optimization for engineering design Practice Hall.
4. Vedula S. And Majumdar Y. P. Water resources systems-modelling techniques and analysis McGraw Hills Co.

**Course Objective:**

To implement the knowledge of Environmental Biotechnology in various Environmental Engineering fields like Environmental monitoring & Environmental Management.

**Course Outcomes:**

1. Application of principles of biotechnology to monitor various environmental pollution problems.
2. Practise various biotechnological means for the production of value added chemicals and energy

Basic concepts of Microbial Biochemistry of carbohydrates, proteins and fats; structure of nucleic acids Deoxyribose nucleic acid - DNA and Ribose nucleic acid - RNA

Basic concepts of biodegradation, biotransformation, bioleaching and biobeneficiation; Different types of microbial associations or interactions.

Environmental monitoring – significance of monitoring bacterial, viral and protozoan pathogens; Techniques of monitoring – gene probes, biosensors and immunoassay.

Basic concepts of Genetic Engineering – genes, chromosomal DNA, plasmid DNA, replication of DNA, genetic code, transformation, transduction and conjugation processes in bacteria, mutation, recombinant DNA techniques.

Biotransformation of biomass / organic waste into value added chemicals and energy, Single cell proteins, Microorganisms involved and biochemical changes of different pollutants present in liquid wastes, Types of reactors, pathways of bioenergy production – biomethane production, bioethanol production etc.

**REFERENCES:**

1. Balasubramaniyan et al. Concepts in Biotechnology Sangam Books ltd. Latest.
2. Dubey, Text book of Biotechnology, Latest.

**Course Outcomes:**

1. Gain knowledge of fate and transport mechanism of contaminant in water system.
2. Application of knowledge of Systems Modeling to various environmental engineering systems.

Definition; Classification; Examples and Models of Environmental Systems.

Introduction to Air Quality Models; Metrology; Atmospheric Stability and Turbulence; Gaussian Plume Model and Modifications; Numerical Models, Urban Diffusion Models;

Introduction to river, estuarine and lake thermodynamics, Stratification of lakes, Dissolved Oxygen Model for streams, Temperature Models, Prediction of fate of organisms and toxic substances.

Models for predicting water quality changes in water distribution systems

Computational methods in Environmental Modelling.

**REFERENCES:**

1. Gilbert M. Masters Introduction to Env. Engg. and Science Practice hall, India.
2. Thomann R. V. And Muller J. A. Principles of surface water quality modelling and control Harper international edition 1987.

Technobangolous G. , Schroader E. D., Water quality Addison-Wesley publishing co. Reading Massachusetts

**Course Objectives :**

1. Understand Remote sensing process
2. Carry out georeferencing and Digital Image Analysis
3. Teach them the concept of GIS and its applications
4. Learn vision development through spatial analyses
5. Carry out analyses in absence of field data
6. Carry out spatial analyses for resource management
7. Generate research orientation in students

**Course Outcomes:**

Students will be able to apply the knowledge of remote sensing technique with proper understanding and use of customized products for management of natural resources for sustainable development

Fundamentals of Geoinformatics: raster and Vector Data, Resolutions of RS data, Thermal and Radar and Lidar Sensing, spatial and non spatial information, attribute data collection, data formats, data conversions, elements of image interpretation. RS as a technology for data extraction, multithematic data extraction using multispectral sensors, thematic map generation.

Interpolation, Overlay analyses, Buffer analyses, Query shell. Spatial analysis, Modeling of spatial data, Network analysis, digital terrain elevation models, Customization and Decision Support Systems.

Applications of Geoinformatics for spatial management of resources: Run-off estimations, infiltration characteristics, groundwater potential and recharge characteristics, Watershed management, watershed prioritization, Sediment yield estimation, reservoir capacity studies, transportation design and planning, Spatial analyses for Environment Impact assessment, Monitoring and feedback, Natural indices, Concept of E-Governance using Geoinformatics, web GIS. Integrated applications using various technologies within Geoinformatics; methods and approach. Real time and temporal analysis using Geoinformatics.

Multidisciplinary applications of Geoinformatics; integration of various segments. Geoinformatics for resources management and utilities management.

**CEP 531- SPATIAL ANALYSES FOR RESOURCES MANAGEMENT****[(0-0-1); Credits**

Spatial Digital Data, resolution and Formats

Data preparation and image registration

Digital Image analysis and Classification

Vector Data generation, topology building and attribution

Interpolation, Overlay, Buffer and Network analysis

Thematic maps generation

Models for Resource analysis

## **CEL 540-INDUSTRIAL WASTE WATER TREATMENT RECYCLE & REUSE [(3-0-0);Credits 3]**

### **Course Outcomes:**

1. Understand and apply basic concepts of industrial wastewater treatment.
2. Apply principle of waste minimisation for reuse recycling and recovery.
3. Synthesize treatment system, component or processes for industrial wastewater treatment.
4. Formulate and design treatment units using hydraulic principles and calculation techniques for industrial wastewater treatment process.
5. Development of treatment flowsheet based on wastewater characteristics for various industries.
6. Analyse and evaluate treatment alternative flow sheets through case studies.

Industrial pollution and its measurement; Generation of Industrial wastewater, Disposal standards; Quantification and characterization of wastewater and its variations; Environmental impacts due to discharge of wastewater on streams, land and sewerage system; Industrial waste survey; Stream sanitation, stream sampling, Stream survey; Principles and techniques for Industrial Pollution prevention and control; Waste minimization; recent trends in industrial waste management, Cleaner technologies; Reuse, Recycling and Resource recovery; Volume and strength reduction; Equalization and proportioning; Neutralization; Methods of Disposal and treatment for removal of organic, inorganic, solids, pathogens, heavy metals and other pollutants; Alternatives and Synthesizing industrial waste treatment system; Joint treatment of industrial waste; CETP; Pollution control measures and Treatment of wastes from various industries viz. Pulp and paper, tanning, Sugar, Dairy, Chemical, Cement, Petroleum, Fertilizers, Metal Finishing, Etc.

5. E.B. Besselievre, The Treatment of Industrial Waste Mc-Graw Hill Book Co. 1<sup>st</sup>.

Analysis of distribution networks with controlling elements, Rules for solvability of pipe networks, Unknown pipe characteristics in network analysis.

Performance of water distribution networks under deficient condition, Various models, Bhave's NFA method, Performance of primary and secondary networks under deficient condition.

Fuzzy analysis of Water Distribution Networks – Fuzzy parameters, Membership function, Methods to obtain membership functions of dependent parameters using Optimization method and Method based on Impact table.

Reliability Analysis – Factors affecting reliability, Topological and hydraulic redundancy, Concepts and measures in reliability analysis, Introduction to analytical and simulation methods, Reliability factors.

Uncertainty analysis – Monte Carlo simulation, FORM method etc.

Design of Water Distribution Networks

- i) Minimum cost design
- ii) Flexible design based on flow distribution models
- iii) Reliability based design
- iv) Resiliency based design

1. **Bhave, P. R.** *Optimal design of water distribution networks*, Narosa Publishing House, New Delhi.
2. **Bhave, P. R. and Gupta R.** *Analysis of water distribution networks*, Narosa Publishing House Pvt. Ltd.

**Course Outcomes:**

1. Gain a broad understanding of energy efficient building designs.
2. Identify, formulate, and solve engineering problems
3. contemporary issues and development
4. use the techniques, skills, and modern engineering tools necessary for engineering practice.

Conservation & energy efficiency concepts-overview of significance of energy use and energy processes in buildings.

Solar energy fundamentals & practices in building design- solar astronomical relations and radiation physics and measurements, design decision for optimal orientation of building, shadow analysis.

Heating and ventilation design- Human thermal comfort, climatological factors, material specifications and heat transfer principles, Thermal performance evaluation, Heat loss from buildings, design of artificial ventilation system, design of insulators.

Design audits & economic optimization- Concept of cost/benefit of energy conservation & carbon footprint estimation.

Energy efficient lighting system design: Basic terminologies and standards, daylighting and artificial lighting design, auditing.

Advances in computational energy conservation- implementation of computer energy simulation programs into building designs.

**Course Outcomes:**

Understand and apply basic principles of decision making and risk analysis

Develop cause- consequences diagram, Analyse and evaluate risk for various environmental engineering, water resources engineering and construction technology.

Need of Decisions and Risk analysis for construction management, Strategic and integral planning, Decisions making for site selection, construction, execution and operation of projects, Documentation, Project proposals, Economic based decision, Legal Aspects of project management, Decision Models, Risk and Uncertainty, Theory and Techniques of Decision and Risk Analysis, Qualitative and Quantitative risk analysis tools /methods, Modelling Value Systems, Value Management for Construction, Competitive Bidding and Risk Sharing, Environmental appraisal, ISO 14000, Hazards identification, analysis and risk assessment, Accident and incident Analysis and control systems, IS 3786, S.H.E. Management IS15001, Training & Education Management Oversight and risk tree, Risk control and Treatment, Risk management and Internal control, Risk mitigation, Risk management plan, IT and IS for Risk management
